PREFACE

The Endocrinology Index is a bimonthly publication of the National Institute of Arthritis and Metabolic Diseases. This selected bibliography which is produced from the National Library of Medicine's Medical Literature Analysis and Retrieval System (MEDLARS), has been initiated to supply those scientists working in the field of endocrinology with a much needed current awareness tool and is intended to help facilitate greater integration of research and clinical efforts in this field.

The National Institute of Arthritis and Metabolic Diseases is able to make available to qualified investigators in the field of endocrinology a limited number of free copies. Requests from qualified individuals to receive free copies of this publication, address changes, and other communications should be addressed to:

Scientific Communications Office
Endocrinology Index
National Institute of Arthritis and
Metabolic Diseases
National Institutes of Health
Bethesda, Maryland 20014

This publication is also for sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Subscription price per year in the United States, Canada and Mexico $16.00, foreign $4.00 additional and $2.75 per single copy. Payment is required in advance, and check or money order should be made payable to the Superintendent of Documents.

Use of funds for printing this publication approved by the Director of the Bureau of the Budget on October 7, 1968.

Acknowledgment

The Endocrinology Index was compiled with the cooperation and assistance of the staff of the National Library of Medicine. The citations were processed by the Library's computer-based Medical Literature Analysis and Retrieval System (MEDLARS) and were printed from film composed by Graphic Arts Composing Equipment (GRACE), MEDLARS' high-speed phototypesetter.

EXPLANATION OF FORMAT

The period covered by this issue of the bibliography corresponds to the same months of Index Medicus. The journal coverage is limited to journals covered by Index Medicus, but the Endocrinology Index contains additional subject headings that are not included in Index Medicus. This Endocrinology Index is arranged in seven sections: 1) Table of Contents; 2) Subject Section; 3) Review Section; 4) Method Section; 5) Author Section; 6) Subject Index; and 7) Author Index.

Subject Section

This section is for the reader interested in recent literature related to certain broad topics. The subject section is divided into eight categories (pituitary, thyroid, etc.). The endocrine pancreas has not been included since it is the subject of another recurring bibliography, Diabetes Literature Index. Each category has a preconceived hierarchical organization of subject headings. A particular citation may appear more than once if it deals with multiple topics. Each citation to an article contains the full title, first author, and journal reference. If the article is written in a foreign language, the language is indicated. If the citation is to a review article, the number of references is given.

Author Section

This section provides the reader with a list of keywords or index terms assigned to each citation. In this section each article appears only once. The citations are arranged alphabetically according to first author and are numbered consecutively. These numbers are then used in the Author and Subject Indexes to enable the reader to identify references with ease. The complete citations (including index terms) are found in this section, but only the first three authors are listed. Foreign titles appear in the original language; these titles have been translated into English in the Subject Section. Following each citation are index terms which have been assigned to describe the contents of the article. Index terms appear in capital letters; some of these are accompanied by subheadings which appear in lower case letters; asterisks (*) identify the index terms under which articles appear in Index Medicus.

Subject Index

All of the index terms assigned to the citations appearing in the bibliography are listed, followed by citation numbers which correspond to the numbers in the Author Section. This section is included for the convenience of the reader who wishes to select articles falling in categories of his own conception. For example, one who is interested in protein binding of a particular hormone could quickly find whether there were any articles dealing with this subject by seeing whether there were any citation numbers common to the two headings "protein binding" and the name of the specific hormone.

Author Index

The names of all authors are listed, followed by citation numbers which correspond to the numbers in the Author Section.

Citations from the July and August biweekly issues of the NLM Current Catalog are listed here. These are citations to publications, catalogued by the National Library of Medicine or one of its cooperative cataloging partners, which have an imprint date of the current or two preceding years. Citations include the price of the publication (in dollars) whenever this information is available.
